

Conditional NF: Paradigm 1 cHINT

Conditional HINT explicitly makes the transport map on both y and x

$$T_{\theta}(\mathbf{y}, \mathbf{x}) = \begin{bmatrix} T_{\theta_y}(\mathbf{y}) \\ T_{\theta_x}(\mathbf{y}, \mathbf{x}) \end{bmatrix} = \begin{bmatrix} \mathbf{z}_y \\ \mathbf{z}_x \end{bmatrix}$$

Conditional NF: Paradigm 1 cHINT
