

Why do we care about generative models?

“What I can not create I do not understand”
-Richard Feynman

“...generative capabilities are the key to intelligence...”
-Max Welling

Why do we care about generative models?

“What I can not create I do not understand”

“...generative capabilities are the key to intelligence...”
-Max Welling

Ex: in classification the generative conditional $p(x | y)$ is more powerful

$$p(y | x) = p(class | image)$$

$$p(x | y) = p(image | class)$$
